

## Top Features of The School Management Software

### Student Information

This software can record a student's information efficiently. This includes their attendance, grades, assignments, test results, discipline, and overall performance.

### Parent Access

It is difficult for parents to track their child's academic performance. Just visiting the school to collect results will not tell parents about the overall performance of their child.

### Attendance and Timetable

The class teacher is responsible for recording the student's attendance every day.

### Assessments Management

Students have to complete monthly assignments. Likewise, teachers have to check these projects and give students grades according to their creativity.

### Fee Tracking and Admission

Collecting fees, passing the entry in financial books, and preparing invoices are the tasks that need a professional accountant and a quality school management solution.

### Payroll and HR

Schools not only have to record students' progress and identity information, but they also have to distribute payments to the teachers and staff working for the institution.

### Library Management

Issuing a book from the school is the second most challenging task after attendance. Libraries are filled with a plethora of books.
