

xAPI in a nutshell

Trackable learning is no longer confined to what happens in the LMS.

Experience API (xAPI) tracks all types of learning experiences based on three components:

ACTOR

This is the learner that is linked to the experience and can be an email or other identifiable data

VERB

What the learner did:
Answered | Commented
Watched | Passed
Completed

OBJECT

What activity the experience is linked to:
Question | Forum
Video | PDF

xAPI is captured in a Learning Record Store

No matter where the experience happens, it can be recorded with xAPI.

NOT LIMITED

xAPI is not limited to just a Learning Management System, it can be used in just about any connected system

FLEXIBLE

xAPI data can be accessed by different systems to check learning outcomes or any experience and learners can take their data with them!

PLATFORM AGNOSTIC

Can be accessed from any platform, any application and any device
