

4 Amazing Features of Lectora Inspire for Rapid E-learning

Organizations rely on rapid authoring tools to speed-up the eLearning development process and cut down costs. Here are some reasons why Lectora Inspire is the right choice for rapid eLearning development.

1. HTML5 is the Future of E-learning

- Lectora Inspire was one of the first tools that offered HTML5 support for rapid custom eLearning courses.
- It handles Flash-to-HTML5 conversions with ease, by means of the tool's Responsive Course Design (RCD) feature, which enables courseware designers to resize and orient the course elements to match the screen size or dimensions of various devices.

2. Learners Learn Better through Real World Scenarios

- With Lectora Inspire, designers can make branching scenarios, taking fun a notch ahead in the context of learning.
- A branching scenario is almost like a choose-your-own-adventure strategy, where every decision a learner makes impacts where they end up and what their options are.

3. Knowledge Tests Can Be Fun with E-learning Assessments

- When using Lectora Inspire for creating rapid custom eLearning, designers can make use of the nine different assessment types that Lectora offers including MCQs, True/False, and Drag and Drop among others.
- These assessments can be tracked through an LMS. Apart from tracking, organizations can generate reports based on the assessments to calculate the effectiveness of the training program.

4. Training Programs to be Provided in Various Languages

- Learners need to be given the option of choosing their native language or any language they are comfortable with for the training.
- With Lectora's Translation Tool option, courseware designers can offer learners a multilingual interface in the course, enabling them to switch between languages at any point while accessing the course, without having to restart the course.

There's no doubt that Lectora offers robust features that can easily fulfil modern learning needs.
