

4 EXAMPLES OF SIMULATION-BASED LEARNING

AVIATION

Pilots in training can use flight simulators to get familiar with plane controls, and practice flying in different weather and landing conditions.

MEDICAL

Medical students use simulation tools to practice surgeries, crisis interventions, and administer prescriptions.

MATHEMATICS

Mathematicians and economists can use simulations to study probabilities and statistics in a theoretical event.

MANUFACTURING

Manufacturing plants include simulation tools to plan, design, and train automated processes and manufacturing systems.

AND MANY MORE!

There are many examples of training using simulators in different industries. What other examples can you think of?
