

1.

Make sure your design is responsive.

Stay consistent with your design. The view of the content should only slightly change when using a device with different dimensions.

2.

Microlearning is your friend.

Be sure to have content broken down into sections. This helps the user stay engaged and gives them an overview of what's to come.

3.

Size matters.

Nothing is worse than having content that won't load. Be sure to have your course file size as small as possible. Doing so will reduce loading issues.

4.

Interactivity is key.

These screens are just as powerful as the traditional computer. Therefore, be sure to take advantage and include interactive graphics and assessments.
